***NOTICE OF ALLOWANCE***

1. Claims 2-16 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

Spring et al (4,235,580) teach an apparatus for pressing concrete blocks, comprising a cell-divided under part having a plurality of cells (11, col. 2, lines 33-35) which are opened in both upper and downward directions (col. 2, lines 35-37 and col. 3, lines 11-15), a corresponding upper part (19) having a plurality of pressure plungers (20) extend in a downward direction and having lower pressure plates which pass down into respective cells in the under part and ejecting the molded blocks from the cells (Fig. 4), and guidance means (17) are provided for ensuring the pressure plates maintain their position relative to the lower part (col. 2, lines 38-65).

In regard to claims 2-5, 10-11 and 16, Spring et al fail to teach or suggest that guidance means for ensuring the pressure plates maintain their positions relative to the cells comprising a pressure plunger with at least one **guiding pressure plate** which is configured with an upwards extension so that it maintains guiding engagement with the sides of the corresponding cells in the under part when the under part is raised to a certain to a minimum height which is greater than the thickness of the under parts.

In regard to claims 6-9 and 12-15, Spring et al fail to teach or suggest that the guidance means for ensuring the pressure plates maintain guiding engagement with the sides of the corresponding cells in the upper part consisting of stop pins that are **threaded spindles**, each is inserted through a hole in the retaining plate and is secured by the tightening of a nut or a bold-fastening.
